RAs Now Available on Montana Medicaid Provider Website; More Features Planned

Providers are now able to download their remittance advice (e!SOR) reports online at the mtmedicaid.org website. Each RA will remain available in PDF format for 90 days. Reports dating back to the October 17, 2005, payment date are available. The reports can be found through the *Provider Services* option on the main menu.

In addition, the eligibility inquiry and claims status interaction transactions have been enhanced.

Since September 2005, providers have been able to verify client eligibility, submit claims to Medicaid, check the status of a claim, and verify the status of a warrant online at the site. Eligibility and claim status may be requested for a single client with real-time response, or requests can be submitted in batches with HIPAA compliant responses available within 24 hours.

User IDs are designed to allow providers to manage their organization's user access for maximum security.

Other features under development include the ability to enroll with Medicaid and view clients' medical history online.

In addition to the existing provider resources available at mtmedicaid.org, the new provider services will save providers time with the convenience of a "one-stop" Medicaid resource center. These options will be released in phases, so watch upcoming issues of the *Montana Medicaid Claim Jumper*, and visit mtmedicaid.org frequently.
